Siliconeglue Transferfoil

Usage:

Application of Hot Fix articles as well as all kinds of transfer-motifs (Rhinestone, Aluminium, Sequins) on textiles.

Nagel & Hermann OG can provide you a high quality transferfoil!

The N&H transferfoil is a first-class transferpaper, produced in Europe and laminated with a special siliconeglue.

This product was especially developed to provide an easy removal from textiles without leaving any visual residue or damaging the garment.

For the best protection of your motifs whilst handling and transport, the N&H Transferfoil has a stronger protective sheet than comparable products.

The procedure of removing the sheet is faster and easier because of the 1/4" (5mm) margin, that has been left glueless. (see sketch below)
